

Verdachtsdiagnose und Labor in der gynäkologischen Praxis

INDIKATION	VORGESCHLAGENE UNTERSUCHUNGEN
Alopezie	Androstendion (Serum), Testosteron, gesamt (Serum), TSH basal (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), Ferritin (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum)
Amenorrhö, primäre	17-Hydroxy(OH)-Progesteron (Serum), LH (Serum), TSH basal (Serum), FSH (Serum), Östradiol (E2) (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum)
Amenorrhö, sekundäre	TSH basal (Serum), Prolactin (Serum), Östradiol (E2) (Serum), Testosteron, gesamt (Serum), LH (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), FSH (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum)
Androgenisierung (Akne, Hirsutismus, Virilisierung)	Androstendion (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), Testosteron, gesamt (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum)
Gynäkomastie	Alpha-Fetoprotein (Serum), LH (Serum), Beta-hCG, freies (Serum), Prolactin (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), FSH (Serum), TSH basal (Serum), FSME-ASI Testosteron, gesamt (Serum), GnRH-Test (Jungen und Männer) (Serum), Östradiol (E2) (Serum)
Infektanfälligkeit	Blutbild, großes (EDTA-Blut), Eiweißelektrophorese (Kapillarzonen-E.) (Serum), Immunglobulin G (IgG)-Subklassen (Serum), Immunglobulin A (IgA) (Serum), Lymphozytendifferenzierung (EDTA-Blut), Immunglobulin G (IgG) (Serum), CRP (C-reaktives Protein, ultrasensitiv) (Serum), Immunglobulin M (IgM) (Serum), HIV-1/2-Ak / p24-Ag (ECLIA) (Serum)
Metabolisches Syndrom	Cholesterin, gesamt (Serum), Homocystein (LC-MS) (Natriumfluorid), HDL-Cholesterin (Serum), CRP (C-reaktives Protein, ultrasensitiv) (Serum), LDL-Cholesterin (Serum), HbA1c (NGSP) (EDTA-Blut), Triglyceride (Serum)
PCO (Polyzyst. Ovar-Syndrom)	Cholesterin, gesamt (Serum), LH (Serum), HDL-Cholesterin (Serum), FSH (Serum), LDL-Cholesterin (Serum), Prolactin (Serum), Triglyceride (Serum), Testosteron, gesamt (Serum), 17-Hydroxy(OH)-Progesteron (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), Androstendion (Serum), Cortisol (Serum), HbA1c (NGSP) (EDTA-Blut), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum), Östradiol (E2) (Serum)
Schwangerschaftsvorsorge (infektiologischer Status)	Stufe 1: Chlamydia-trachomatis PCR (Urin), Syphilis-Ak (IgG+IgM) (LSR) (CMIA) (Serum), HBs-Ag (ECLIA) (Serum), (sofern Impfstatus unbekannt Röteln-IgG, ggf. HIV-1/2-AK/p24-Ag (HIV-Suchtest)) Stufe 2: Cytomegalievirus-Ak (IgG) (CMIA) (Serum), Toxoplasma-Ak (IgG) (CMIA) (Serum), Parvovirus-B19-Ak (IgG) (CLIA) (Serum), Varizella-Zoster-Virus-Ak (IgG) (CLIA) (Serum)
Sexuell übertragbare Krankheiten	Chlamydia-trachomatis PCR (Urin), HIV-1/2-Ak / p24-Ag (ECLIA) (Serum), HBc-Ak (ECLIA) (Serum), Herpes simplex-Virus 1/2 DNA (PCR), HBs-Ag (ECLIA) (Serum), Neisseria gonorrhoeae DNA (PCR) (Abstrich), HCV-Ak (ECLIA) (Serum), Syphilis-Ak (IgG+IgM) (LSR) (CMIA) (Serum)
Sterilitätsabklärung	Androstendion (Serum), Testosteron, gesamt (Serum), TSH basal (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), Östradiol (E2) (Serum), Cortisol (Serum), LH (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum), FSH (Serum), Anti-Müller-Hormon (Serum), Prolactin (Serum)
Zyklusstörungen	17-Hydroxy(OH)-Progesteron (Serum), Prolactin (Serum), Androstendion (Serum), Testosteron, gesamt (Serum), TSH basal (Serum), Sexual-Hormon-bindendes Globulin (SHBG) (Serum), Östradiol (E2) (Serum), Cortisol (Serum), LH (Serum), Dehydroepiandrosteron-Sulfat (DHEA-S) (Serum), FSH (Serum)

Das benötigte Untersuchungsmaterial sowie präanalytische Hinweise entnehmen Sie bitte unserem Leistungsverzeichnis oder unserem Analysenverzeichnis im Internet unter <https://www.bioscientia.info/diagnostik-app/de/indikationen/>
